International Brotherhood of Boilermakers Newsletter

A boilermaker is a tradesperson who manufactures, installs, and maintains boilers, tanks, and closed vats. Boilers heat the liquid, usually water, that is used to generate electric power or provide heat to buildings, factories, or ships. Tanks and vats are storage containers that hold chemicals, oil and other liquids.

Boilermakers are responsible for the maintenance and repair of boilers that may last for over 50 years. This includes ongoing inspections and the replacement of valves, fittings, feed pumps, and other boiler components.

To learn more about becoming a Boilermaker, please click on the link below:
